Augmented Reality (AR) is an interactive experience of a real-world environment whereby the objects that reside in the real-world are "augmented" by computer-generated perceptual information, sometimes across multiple sensory modalities, including visual, auditory, haptic, somatosensory, and olfactory. The overlaid sensory information can be constructive (i.e. additive to the natural ...

On hearing the term "Augmented Reality"™ (AR), most people immediately think of low cost interactive children's gaming apps. Whilst these games are entertaining, and have brought the idea of AR more into the public domain, there are many more practical use cases for the new technology, such as healthcare, education, engineering and manufacturing.
