Guideline for Monitoring and Management of Pediatric

Oral sedation dentistry is a medical procedure involving the administration of oral sedative drugs, generally to facilitate a dental procedure and reduce patients fear and anxiety related to the experience. Oral sedation is one of the available methods of conscious sedation dentistry, along with inhalation sedation (nitrous oxide) and conscious intravenous sedation.

CPT coding guidelines instruct practices not to report Codes 99143 to 99145 in conjunction with codes listed in Appendix G. The National Correct Coding Initiative added edits in April 2006 that bundled CPT codes 99143

CMS Manual System

Rescue Capacity: As stated above, because the level of sedation of a patient receiving anesthesia services is a continuum, it is not always possible to predict how an individual patient will respond. Further, no clear boundary exists between some of these services. Hence, hospitals must ensure that procedures are in place to rescue patients whose level of sedation

Guidelines and Standards for Performance of a Pediatric

Anesthesia is the combination of the endpoints (discussed above) which are reached by drugs acting on different but overlapping sites in the central nervous system. General anesthesia (as opposed to sedation or regional anesthesia) has three main goals: lack of movement (immobility), unconsciousness, and blunting of the stress response. In the early days of anesthesia, anesthetics could reliably achieve ...
