In object-oriented programming (OOP), a factory is an object for creating other objects " formally a factory is a function or method that returns objects of a varying prototype or class from some method call, which is assumed to be "new". More broadly, a subroutine that returns a "new" object may be referred to as a "factory", as in factory method or factory function.

In programming languages and type theory, polymorphism (from Greek  $\text{πολῦς}$ , polys, "many, much" and  $\text{μορφή}$ , morphē, "form, shape") is the provision of a single interface to entities of different types. A polymorphic type is one whose operations can also be applied to values of some other type, or types. There are several fundamentally different kinds of polymorphism:

This book is not about JavaScript design patterns or implementing the object-oriented paradigm in JavaScript. It was not written to distinguish the good features of the JavaScript language from the bad. It is not meant to be a complete reference guide. It is not targeted at those new to programming or those completely new to JavaScript. And it is not a cookbook of JavaScript recipes.
